

Iteration 1 - Heterogeneous Structures Generation

Best First Aggregation: N-0 S-0 -> N-6 S-3 of Structure 4 with the best score of 1.7

Iteration 1 - Thought Chain Analysis as Experience

Analysis:

Step 1: The operation is correct. The multiplication of 1 and 4 gives 4. The remaining numbers and the new set are also correct.

Step 2: The operation is correct. The multiplication of 4 and 6 gives 24. The remaining numbers and the new set are also correct.

Step 3: The operation is incorrect. The subtraction of 24 and 1 gives 23, not 24. The remaining numbers and the new set are incorrect as well.

Advice:

Step 1: No advice needed. The step is correct.

Step 2: No advice needed. The step is correct.

Step 3: The operation should be adjusted to make the new number 24. Instead of subtracting 1 from 24, you should multiply 24 by 1. The remaining numbers and the new set should be adjusted accordingly. The new set should only contain 24.

Iteration 2 - Heterogeneous Structures Generation
